Connor
MuseKat Bug Testing Report

Date: 5/8/2025
Device: Windows laptop

What happened?
Miko would tell me that she cannot process the request. "I'm sorry but I can't help you with that/can't process that"

Where in the program?
After I used an image that she either could not recognize or refused

What age group?
Ages 7-10

Any error codes?
No.

Screenshot?
N/A

Could you replicate the error?
Yes.

What I would suggest for users to be coming back to MuseKat would be longer story times, mini quizzes for using multiple photos, and/or more options to the AI storytelling such as

Ayan
MuseKat Content Testing Report

Date: 5/8/25
Device: HP LAPTOP
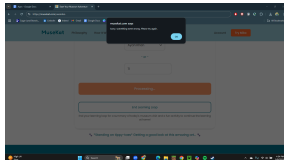

Incident report 1

What happened? Drug Enforcement Administration (DEA) Museum

Where in the program? Musekat

What age group? 11

Any error codes? Sorry, something went wrong. Please try again.

Screenshot? Slack

Could you replicate the error? Yes

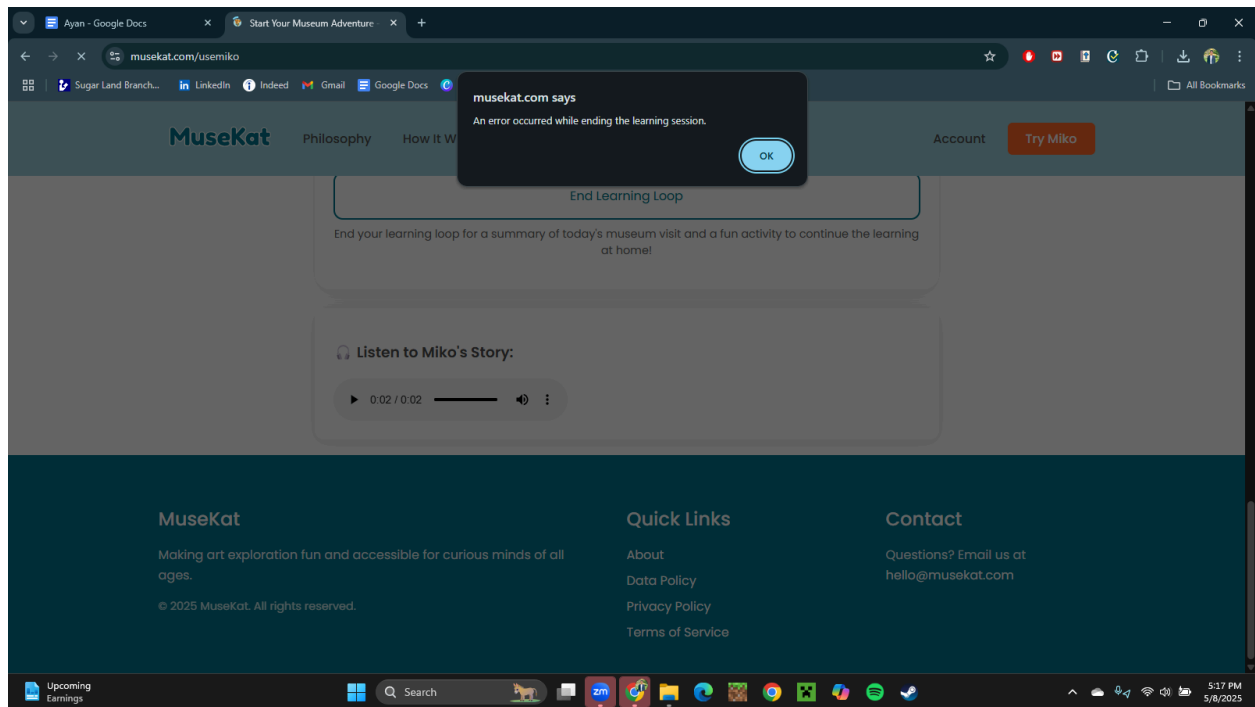

Incident report 2

What happened? Would not send Learning loop with inapporatible   picture

Where in the program? Learning Loop

What age group? 5 y/o

Any error codes? Failed to end learning session: Unknown error

Screenshot?

Could you replicate the error? Could replicate with older age and it would say sorry can't help with that.
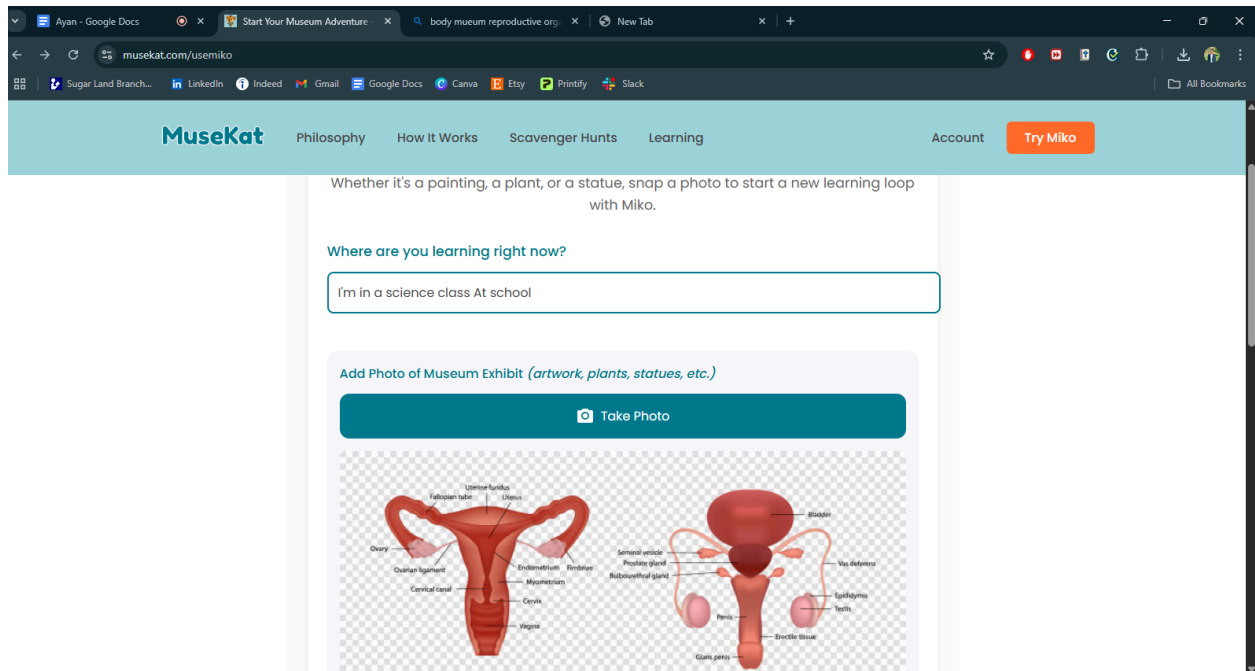

Incident report 3

What happened? Reproductive Organs diagram

Where in the program? At the bottom with miko talking

What age group? Age 5 And Age 11

Any error codes? No

Screenshot?

Could you replicate the error? Yes with both 5 and 11 ages

MuseKat Bug Testing Report

Date: May 8, 2025
Device: iMac running Sequoia 15.4.1, using browser based version

Incident report 1

What happened? I wanted Miko to tell me about a painting at the Museum of Modern Art, but received an error message. (See attached image)
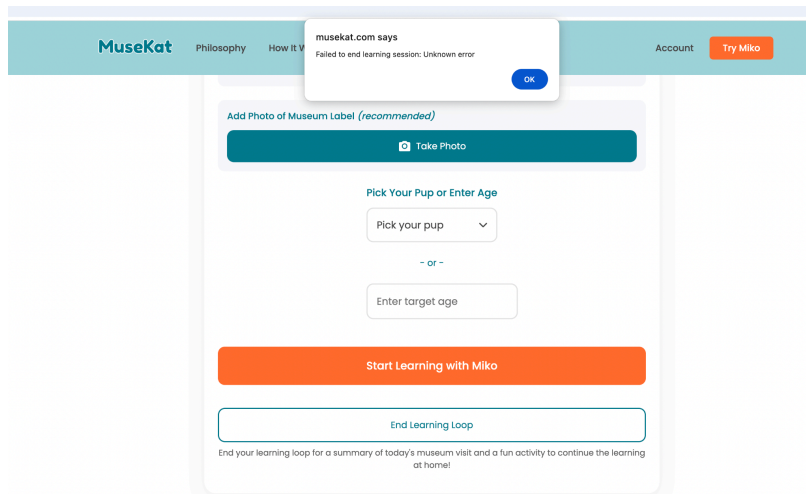

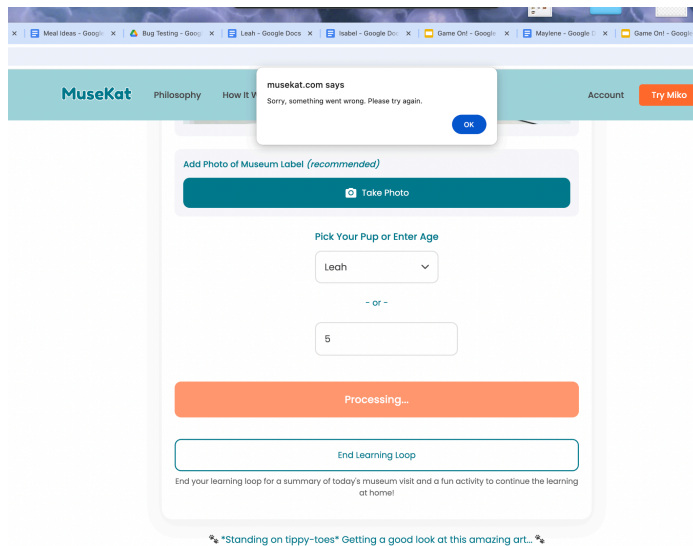

Where in the program? I uploaded the image and clicked "Start Learning with Miko".

What age group? 5

Any error codes? Asked me to try again, but I could not move forward

Screenshot? Attached

Could you replicate the error? See second image. The image I chose is not from their master works collection, so maybe Miko didn't know it? But I would guess, there could still be a story there for a 5 year old about abstract painting.

Incident report 2

What happened? I uploaded a photo from a lion at the zoo

Where in the program?

What age group? 5 and 12

Any error codes? No, but the program thought it was an artwork of a lion and not an actual lion at a zoo.

Screenshot?

Could you replicate the error? Yes, it was the same lens for the 5 year old and the 12 year old.

Incident report 1

What happened?
When displaying the information about Masks the new line command (\n\n) appeared
Where in the program?
In the story transcript box
What age group?
5
Any error codes?
N/a
Screenshot?

Could you replicate the error?
Not sure

Incident report 2

What happened?
The code's structure displayed in the story transcript box
Where in the program?
In the story transcript box
What age group?
18
Any error codes?
N/A
Screenshot?

Story Transcript

{

  "primaryResponse": "Hello there! Are you ready for an exciting adventure? This plush creature looks like it came straight out of a fantasy story! With its unique shape and vibrant colors, it resembles a character that could lead an epic quest in a magical realm. These designs often inspire creativity and wonder! Did you know that characters like this can reflect deeper themes in our literature and culture, exploring concepts like identity and transformation? By engaging with such artifacts, we see how imagination connects to the real world, influencing art, storytelling, and even gaming! Imagine how many stories this character could tell!  ",
  "question": "How does this character inspire your own creativity?",
  "summary": "Magic in Every Stitch!"
}
```

Could you replicate the error?
Not sure but if I had to guess taking multiple photos of similar objects(i.e plushies) causes this error to occur since for this bug hunt I did 12 photos 11 of them were of various plushies(some repeats some new ones) and when I got to photo 8 which was of a Darkari(a mythical Pokemon) plushie I got that error to occur

Notes:

I gave Miko a photo of a lighthouse that is near where I live. I tested for a 5 year old. It mostly came back with an appropriate story. Miko also gave a more advanced response for the 12 year old. Miko did not think this photo was an art work, but responded to the landmark directly.

Next I offered a photo of a lobster. The five year old response was pretty good and age appropriate. The 12 year old response was accurate, but not as detailed as I would have liked. My 12 year old self would want more information.

I entered in a photo of friends holding lettuce. Miko did a nice job of describing the scene for a 5 year old and asked a question about favorite vegetables. For the 12 year olds Miko interpreted this as a painting not as a photograph of real people. She asked questions about sustainable agriculture. Referenced ancient Egypt though and Ben also reported Miko referencing ancient Eqypt.

I showed Miko a photo of Whole Foods Market. She described the architecture and mentioned the yummy food inside. Asked the 5 year old what fruits and vegetables are their favorites. For the 12 year old it spoke of architecture, design of the store, symbolism of the materials and commitment of the company to sustainability.

I uploaded a photo of a golden finch. Miko called it a gold finch, but gave a nice story about how the bird is bright in one season and muted in winter, and that it sings a sweet song. 12 year old response was much more detailed and included more facts. Miko says almost everytime "Let's dig into this. . . " Maybe that could be changed up a bit.

For a photo of dandelions, (age 5) Miko thought it was a painting, but provided a nice story anyway. Though Miko did say that dandelions are edible. Thinking maybe there should be something about asking a parent about that?
